SUMMARY

Software Engineer specializing in Generative AI and backend systems, with proven experience building production-grade LLM-powered applications and scalable REST APIs. Developed AI-driven translation systems and edtech features at Wonderslate Technologies, leveraging Java Grails, Python, FastAPI, and modern AI frameworks. Demonstrated expertise in end-to-end API architecture, prompt engineering, and integrating AI models into real-world applications that deliver measurable impact.

WORK EXPERIENCE

Wonderslate Technologies – Bangalore

Associate Software Engineer Intern | Oct 2025 – Jan 2026

- **AI Translation Platform Lead:** Architected and deployed REST APIs for AI-powered document translation system from ground up, integrating GPT-4 and Claude models with 15+ language pairs, processing 200+ daily requests with 98% accuracy and 60% cost optimization through prompt engineering.
- **Full-Stack API Development:** Implemented end-to-end production workflows including prompt engineering, caching strategies, request throttling, and error recovery mechanisms reducing API response time from 8s to 2.5s while maintaining sub-\$0.10 cost per translation.
- **Game-Based EdTech Features:** Extended Java Grails legacy codebase to build interactive game-based learning modules, enabling real-time quiz mechanics, progress tracking, and analytics collection driving 35% increase in user engagement on tattvacampus.ai.
- **Responsive Platform Frontend:** Developed mobile-first UI components using HTML, CSS, and JavaScript for tattvacampus.ai, improving mobile conversion rate by 28% and supporting seamless experiences across 5+ device categories.
- **Rapid Product Iterations:** Owned complete feature lifecycle from requirements gathering to production deployment in fast-paced startup environment, shipping 10+ features in 4 months while maintaining zero critical bugs.

SKILLS

- ♦ **Generative AI:**
LangChain, LLM Integration, Prompt Engineering, OpenAI APIs, Deep Learning, Machine Learning
- ♦ **Backend & APIs:**
Java, Python, FastAPI, Groovy/Grails, REST API Design, Redis, API Architecture
- ♦ **Frontend:**
HTML5, CSS3, JavaScript, React
- ♦ **Database:**
SQL, NoSQL
- ♦ **Cloud:**
AWS, Docker, Kubernetes, CI/CD, Git
- ♦ **Testing:**
Selenium, Playwright, Postman, Manual Testing, Automation Testing

EDUCATION

- **B.E in Computer Science Engineering (VTU) | Bangalore - 2025**
CGPA : 8.18
- **PUC | Reva Independent PU College | Bangalore - 2021**
Percentage : 83.16

PROJECTS

1. Document Translation System | AI-Powered Language Translation Platform

- **End-to-End AI Translation Pipeline:** Architected production-ready translation system integrating GPT-4 APIs with RESTful backend, processing 500+ daily requests across 15+ language pairs with intelligent rate limiting, prompt optimization reducing costs by 60%, and sub-3s response times.
- **Scalable Infrastructure Design:** Engineered complete backend workflow handling document ingestion, multi-stage processing pipelines, structured error recovery, and response validation ensuring 99%+ uptime with automated failover and cost-controlled API usage.

2. Object Recognition & Voice Translation for Visually Impaired

- **Real-Time AI Assistive Device:** Built end-to-end IoT system with smart glasses using MobileNetSSD + OpenCV achieving 85%+ real-time object detection accuracy, integrated NLP pipeline translating detections into 4 regional languages with audio feedback enabling spatial awareness for visually impaired users.
- **Edge AI Deployment:** Optimized and deployed CNN architecture on resource-constrained Raspberry Pi + Arduino with sub-200ms inference latency, combining computer vision, embedded systems, and edge computing to deliver practical, low-cost accessibility solution.
